Mr. Bert Lerch
Protek-USA
4335 Leary Way NW
Seattle, WA 98107

Dear Mr. Lerch,

Dewberry-Goodkind, Inc. recently completed the State Street Underpass Improvement Project for the City of Rochester Department of Environmental Services. This project involved many unique enhancement features including special lighting, signing and landscaping features all designed to improve the appearance of the area and to encourage pedestrian activity between the Central Business District and the High Falls Entertainment District in the City of Rochester. One key element of the project was the staining/painting of a portion of the large concrete retaining walls that support the "Inner Loop" expressway overpass.

Originally another product was specified for the project but after our initial testing of this product, the City was not satisfied with its appearance and so we reached out to Protek-USA to help find a solution.

Protek was able to custom blend three colors using their pigmented concrete sealer to our exact specifications. This product was applied to the concrete retaining walls with great success. The City was very pleased with the results and is considering additional projects which would further use Protek's products along these retaining walls.

Thank you again for your help in making this project so successful.

Sincerely,

Dewberry-Goodkind, Inc.

David Askinazi
